Precision Scale Models

Product Models

Through centuries, craftsmanship and the art of miniatures has been associated with India. In the many sculptures and wide variety of schools of miniatures this is evident. Today, as rapid industrialisation takes place in the country a new breed of artists and craftsmen emerge to carry forward this great tradition. Among them is **Dagart Solutions** the people who create modern day miniatures – the scale model.

The scale model is a focal point of communication among the many different groups involved in new plant construction, renovation, piping design and plant layout. **Dagart Solutions** today undertakes Industrial Models and even 2-D Flow Charts.

Over the past 35 years, **Dagart Solutions** create models that are masterpieces in their own right, by deploying the latest design techniques, craftsmanship of the highest order and an eye for detail.

Responding to new challenges the people at **Dagart Solutions** really get to the root of the design problem before coming up with a solution in the third dimension.

The **Dagart Solutions** team of experts work round the clock to achieve perfection that comes from dedication to one's work. Using sophisticated techniques and know-how it has advanced the technology of precision model making to exacting standards.

Over the years **Dagart Solutions** has built up a long lasting relationship with a number of Industrialists, Businessmen, Architects and Builders.

Dagart Solutions is associated with UK based organisation "ecopartnerships".

The question "Why should we use a model?" is to be deeply etched in everyone's mind since as the wise saying goes, "Models aren't costly, mistakes are and this mistakes may be dearer in the long run".

Hence, for optimum results 3-D model is the only solution with immense benefits, which are not so often considered such as:

- Clarify Design
- Better Understanding & Acceptance
- Arouses Interest
- Overcome Technical Barriers
- Reduce Training Time
- Expedite Agency Approvals
- Overcome Operational Delays & Costly Errors
